This information is used to build a matrix, which the receiver uses to determine what information will be loaded in to the EPG.. First, the test will identify the devices installed by sending a command from the receiver, a 22kHz “ping”, to other DiSEqC devices in the installation.. If the matrix is not built properly, there will be issues when switching from channel to channel, or will have missing channels. [Unduh Youtube D B I b Blackberry Id](#)
